

# Green Pack

*"WiFi Controlled **Green E Pack** saves up to **80%** on **heating costs**"*

The Green E Pack is the next generation in water heating, saving your home up to 80% in hot water heating bills.

Using heat pump technology, to harness naturally occurring radiant heat energy from your roof space to heat water.

Green E Pack connects to your existing hot water cylinder and is currently the only WiFi controlled energy efficient hot water heat pump in New Zealand.

The technology allows you to control and manage the way you heat your water, right from your smart phone.

Cash positive systems.

Saves more in power than repayments when added to your mortgage.

Distance Control

Timer Function

Geolocation

Learning

Monitoring

- Control your hot water heating from your smartphone
- Set timers for heating water
- Turn off when going on holiday to save power. Turn on before arriving home
- Geolocation knows you're home and starts heating water
- Auto mode – learns when you use hot water and only heats the water when you need it
- Monitor your power consumption from your mobile phone
- Works on mains or low-pressure systems
- Simple installation
- Operates with roof space temperatures down to -10c
- Manufactured in Spain with European parts
- "A" Rated European standard to energy efficiency

## Case Studies

Mr & Mrs Hanks Installed a Green E Pack in their home in Dunedin. Mr Hanks said he knew hot water was the largest portion of his power bill and wanted to reduce it as much as possible.

Product installed – Green E Cylinder connected to 300L Cylinder  
 Location – Dunedin  
 Number of occupants: 2 kids 2 Adults  
 Results: \$36 a month for hot water

Client comments -  
 "We have had our system installed for 6 months now and have a consistent bills of around \$50 for all our electricity! Very happy with the product. We have never run out of hot water and as a household enjoy 4 showers and a bath each day without worrying about it. It has been the best investment we have made"

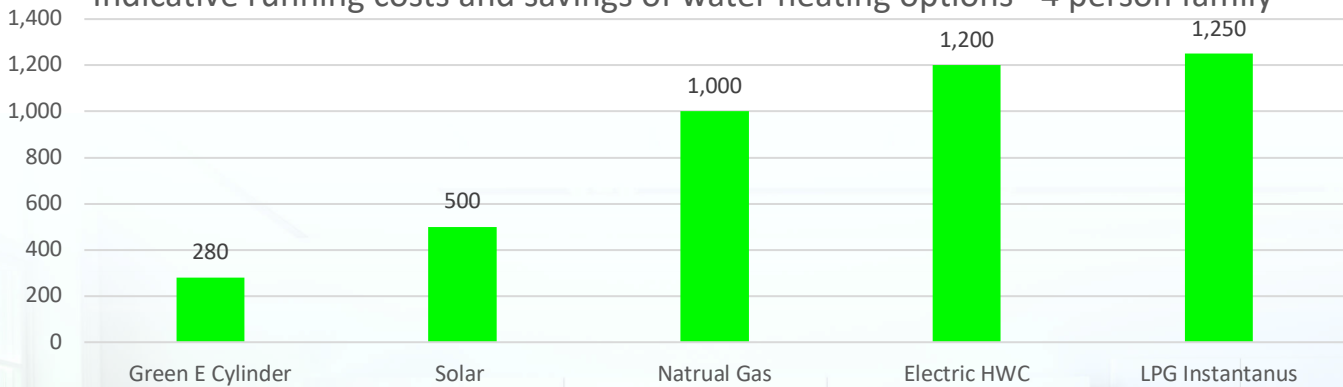

Mr & Mrs Hudson – Nelson

Product – 300L Green E Cylinder  
 Location – Nelson  
 Number of occupants – 2 kids 2 adults  
 Results - \$39 a month for hot water

Clients comments –  
 "We are stoked we had the system installed. Our kids use a lot of hot water. We just didn't realise how much it was costing us until we saw how much the power bill dropped after having the system installed. We are so happy with the system and tell all our friends."

Indicative running costs and savings of water heating options\* 4 person family

Average annual savings  
 Green E Cylinder - \$1000  
 Solar - \$700  
 Natural Gas - \$200  
 Electric Hot water cylinder \$0  
 LPG - \$0
